INDIAN COUNCIL OF MEDICAL RESEARCH
DEPARTMENT OF HEALTH RESEARCH

Guidance on expansion of SARS-CoV-2 testing platforms:

1. ICMR recommends the use of US-FDA approved closed real time RT PCR systems like GeneXpert and Roche COBAS-6800/8800. These systems are approved under emergency use.
2. In addition, TruenatTM beta CoV test on TruelabTM workstation validated by ICMR is recommended as a screening test. All positives through this platform will need to be reconfirmed by confirmatory assays for SARS-CoV-2. All negatives may not be processed further.
3. This is in addition to the previously issued guidelines and subsequent addendums.
